

# SPACE TRAINING STRATEGY

## Defence Space Command

Defence is aiming to rapidly deliver agile and creative space capabilities that are integrated into the Joint force. This requires conceptualising the future workforce and Education and Training (E&T) system, with innovation and partnerships across industry, academia, Defence and government to develop and maintain a critical sovereign space capability.

### Overview

Noetic was commissioned 'to develop a high-quality, evidence based and agile Defence Space Learning Plan' to inform a way forward to achieve a trained, capable and sustainable workforce.

Noetic undertook an environmental scan and performance needs analysis to inform a Defence Space Learning Strategy & Plan.

This program of work applied the Systems Approach to Defence Learning (SADL) and was completed using products and processes defined in the analysis phase.

### Outcome

This significant project delivered key insights discovered during analysis. The recommendations position Defence Space Domain to develop and deliver the DSLP and concepts to enable successful delivery against the DSSWP.
